

## Instructions for a 16-Warp Braid

This is the same braid structure as the eight warp braid. It's best if you make a few of those before trying this one. Working this braid with fine textiles, such as S-Lon \#18 cord will produce a braid that's about 4 mm in diameter.

Illustration 1
Warp set to begin broiding

Illustration 2
Warp set after Step 2
Step 1: Pull 16 pieces of cord and fie them together at one end in an overhand knot. Holding the board face up, place the knot into the center hole. Spread the cords and place one in each of the two notches to either side of the positioning dots. Then place the other 8 warps in sets of 2 in between the first 4 sets. When you finish, there should be two empty slots between each set of 2 warps. Turn the board over and wind each cord into a no-tangle bobbin. For yourf first few braids you may want to add a weight to the bottom of the knot in the center to provide some downward tension on the braid. Twentry-five pennies in a plastic bag are a good choice for a weight. The braid will feed downward out of the center hole as you work it.

Step 2: Just as you did in the 8 warp braid, you're going to start with Dot 32 at the top. Again, you'll be working in sets of 2 and the warps will travel around the board. First, take the bottom left warp and move it to the notch just to the left of the top 2 warps. Then move the right most warp in the top set of 3 to the right side of the single warp at the bottom. For this braid, you rotate the board counter-lockwise just to the next set of warps, making an eighth turn $\left(45^{\circ}\right)$ instead of a quarter turn $\left(90^{\circ}\right)$. Number 4 will now be at the top. Notice in lllustration 2 that the pink warps have moved away from the dots, and the board has been rotated to begin the sequence again.

Repeat Step 2: The only difference is that the dot numbers will be different. Again, you're going to move the bottom left warp to the top leff; move the top right warp down to the right of the bottom warp; then rotate the disk an eighth--turn counterclockwise. Continue to work the braid until you run out of cord. It's possible, especially if you're using different weight texilies, that one cord will be used up more quickly than the others.
NOTES: 1) The braiding sequence (keeping the left on the left and the right on the right) of both the 8 and 16 warp braids on this instruction sheet will always produce a braid with a spiral structure. 2) The look of your braid will be impacted by the placement of colors within the warp set-up. More information about this can be found in the book Braiding for Beaders by Anne Dilker.

## Whipping \& Finishing Braid Ends

Here's how to keep braids from unravelling when they're cut.

1) WRAP a piece of thread (S-Lon size D works well) around the end of the braid 2 or 3 times, leaving a small gap between the whip and the braid knot. Then tie the thread off tightly with a square KNOT. Or, you can first knot the end of the thread and sew the thread through the braid before wrapping and knotting. Remember to keep the whip area small and tight.
2) TRIM the thread ends close to the knot so they won't stick out, then CUT the braid close to the whip.
(3)
3) When the braid is ready to be finished, GLUE an end cap into place so that it covers over the whip thread.

## Iry Leaf Necklace

 You'll need:- Eight 20" pcs. of 2mm Rattail" (\#7 lightweight) in Comel, Coffee, Dark Green, Emerald, Gold,
Navy Blue, Purple, \& Roval Blue (one piece per color) Sixteen 8mm Smooth Druk Czech Glass beads. Colors from BeadSmith's exclusive Heavy Metal Mix 3 dozen 3mm Faceted Fire-Polished Round Czech Glass beads. Colors from BeadSmith's exclusive Heavy Metal Mix
Four Antititarnish Brass 75 mm Hollow beads Two Antitarnish Brass $12 \times 8 \mathrm{~mm}$ End Caps One Antit-ornish Brass $9.5 \times 5 \mathrm{~mm}$ Pendant Slide - One Antitararish Brass $9.5 \times 5 \mathrm{~mm}$ Pendant Sica - One 5mm or larger Jump Ring in Gold color - 2 mm Crimp Beads (at least 4) in Gold color - One Anti-十ornnish Brass Leaf Toggle Ring and Bor -.012" diameter Flex-rite Brass beading wire

In this project you will use eight 20 " warps, one of each color of Rattail. Follow the instuctions to make an 8 - warp braid. For this particular braid, you can set up the colors in any order - the illustration above is iust an example. Once you've finished the briid, remove it from the board and relax the tension by stretching it and running your hand from the bottom to the top. Tie a knot in the open end to hold the braid in place until you're ready to finish it by whipping it closed and odding the end caps. Whip both ends of the braid to form a 7" section (see whipping instructions). Slip the pendant slide onto the braid, then glue both end caps into place. Crimp one end of a piece of tlex wire onto each end cap. For both wires, from end cap to clasp (in random color order), string the following: druk, 3 mm , druk 3 mm , 15 mm brass, 3 mm , druk, 3 mm , druk, 3 mm , 15 mm brass, 3 mm , druk, 3 mm , druk, 3 mm , druk 3 mm , druk, nine 3 mm , crimp bead. Put the end of the wire through the ring on the toggle piece and close the crimp. Lostly, attach the Leaf Pendant to the pendant slide with the jump ring.

Seahorse Necklace You'll need:

- Glass Seahorse Pendant
- 8 gauge Aluminum Wire in Roval Blue for coiled end caps - 12 gauge Aluminum Wire in Turquoise for the S-hook - 3.5 yards ( $2 \times 60^{\prime \prime}$ "pcs) of 2 mm Rattoil" (size \#1) in Aqua - 14 yards ( $8 \times 60^{\prime \prime}$ pcs) each of On the Surface brand metallic thread in Antique Gold, Peridot, \& Sapphire - Super Glue Gel

 In this project you will need eight 60 " warps: two of Aqua Rattail \& 6 of metallic thread (2 of each of the three colors). Each of the six metallic thread warps will be comprised of a total of 4 strands of thread.
Create 2 waps of each color and set up your boord os shown in the illustation, then follow the instuctions to make an 8 wap bricid. When finished, remove the brid and reax the tension by steetching the brid ond unning you hand fom the botiom to the top. Tie a knot in the open end to hod the braid in place unill you're ready to add the end caps.

Making Coil End Caps: create a long coil by wrapping the 18 gauge wie around a mandrel or other form thot's the same diameter as the braid. Cut the coil in haif and lift the 2 end coils on each piece to acceppt the Sthook.
Whip the ends of the briid to accept the end caps (see whipping instructions). Glue one of the coil end caps in place, slip the pendant onto the braid, then glve the other coil end cap into place.
Making an S-hook: Cut a piece of 12 gauge wire about $1-3 / 4^{" 1}$ long. Use round nose pliers (nylon aw, it you have them, to help prevent scratching the wire sufface) to curl the ends of the wire, turning them in opposite directions to create an $S$ shape (don't close the loops completety). Slip one end of the S-hook onto the lifted coils of one of the end caps, then close the loop on that end of the S-hook to permanently attach it to the end cap. The other end of the S-hook will remain slightly open for opening/dosing the necklace.

Heart's Necklace You'll need:

- 8 yards of \#18 S-Lon thread in Carolina Blue - 8 yords of \#18 S-Lon thread in Light Copper - Handblown Glass Heart Pendant in Clear/Blue/Brown
- Four Miyvki 6/0 seed beads in Pale Pink AB
- Sterling Siver Bail with Pin
- Sterling Siver Heart Toggle Clasp
- Two $10 \times 6.5 \mathrm{~mm}$ Sterling Siver End Caps
- Two 7 mm Sterling Silver Oval Jump Rings

Cut eight 36" warps of each color of thread and set up your board as shown in the illustration. This color set will give you a lovely spiral pattern to enhance the spiral pattern in the heart pendant. Next, follow the instructions to create a 16 warp hraid Once you've finished the broid, remove it from the boord and relax the tension by stetching it and finissied tite braiu, remove if from tine board and reax ine eension by sierching if und running your hand from the bottom to the top. Tie a knot in the open end to hold the braid in place until you're ready to finish it by whipping it closed and adding the end caps. Creating the Focal Piece: First slide 3 of the seed beads, the glass heart, and then the last seed bead onto the pin end of the Bail with Pin. Glue the last seed bead to the bottom of the glass heart. Use a mandrel or other form to create a spiral coil in the end of the pin.
Whip the ends of the briid to accept the end caps (see whipping instructions). Glue one of the end caps in place, slip the focal piece onto the braid, then glve the other end cap into place. Attach a toggle piece to each end cap with a jump ring.
