

# Kheops® par Puca® Bead Windmill Jewellery

## Materials

- Kheops® par Puca® beads (6 per windmill)
- Size 11 Czech Glass seed beads
- 4mm 5328 Xilion SWAROVSKI ELEMENTS beads (for links)
- Nymo beading thread
- Size 10 beading needle
- Choice of findings or finishes.

1. Cut a long length of Nymo and thread your needle. Pick up 6 x Khéop beads; thread through the side of the bead with only one hole, exiting out of the side with two holes, tie the two ends together (double knot) forming a circle (this is fiddly - be careful not to over tighten the thread). Take the thread through the second hole in the same bead, coming back on yourself. It's a good idea to fasten off the tail thread from the beginning here to make it easier to continue.

2. Pick up 3 new seed beads, thread through the second hole of the next Khéop bead (that doesn't already have thread going through it) the beads should lie along the edge of the Khéop bead. Continue doing this through all 6 Khéop beads. Finish this round by going through the first 3 beads added in this step.

3. Pick up 3 new seed beads, thread through the next set of 3 from the previous step and continue all the way around adding 3 beads in between each other set of 3. Finish by going through the first bead of the first new set of beads.

4. Pick up 1 new seed bead, thread through 6 outer edge seed beads, pick up 1 more new seed bead and thread through another 6 beads and continue adding singles beads until you have 6 points. Finish by threading through the first single bead added. Your windmill component is complete.

Earrings; Add a Xilion bead after the point, followed by 4 seed beads, thread back down the xilion and the point bead, in the opposite way to balance the top, thread round again for extra strength.

Necklace or bracelet; Join the component together in a similar fashion, using Xilion beads in between point beads and use the working thread to sew them together.

You can finish your windmill jewellery in any number of ways; with chain, or threaded beads...
